

The extralimital dates for migratory birds in our area are based exclusively on the Bird Study Group database as of August 2001. The following table lists the approximate arrival and departure dates of migrants.

**Summer residents (SU)** the first three dates = earliest arrival dates in the spring. Last three dates = latest departure dates in the fall.

**Winter residents (WI)** the first three dates = earliest arrival dates in the fall. Last three dates = latest departure dates in the spring.

**Non-resident migrants:**

- First line (**SP**) lists earliest three arrival and latest three departure dates for the spring
- Second line (**FA**) lists earliest arrival and latest departure dates for the fall migration.
- In some cases fewer than three dates are available for a given category.

**Accidentals (AC)** contain only one or two records.

**Permanent residents (PE)** do not have dates identified.

Red-throated Loon	AC	02/01
